

What Have We Learned?

1. Network Concepts and Architectures
2. Communication Protocols
(e.g. TCP/IP, Bluetooth)
3. Doing Useful Work on a Network
How?
 - Lectures,
 - Reading and programming
 - Project & presentations (30% of total grade)
 - Exams (20% for exam 1 + 30% for final).

Main Focus of This Semester

1. Principles and concepts of networking
2. TCP/IP Architecture
 - Internet
3. Ethernet LAN
4. Wireless Communication
 - Bluetooth
5. Network performance analysis

Introduction: Summary

Covered materials!

- Internet overview
- what's a protocol?
- network edge, core, access network
 - packet-switching versus circuit-switching
- access net, physical media
- performance: loss, delay
- layering and service models

You now have:

- context, overview, "feel" of networking
- more depth, detailed understanding of networking

Application Layer

- Application architectures
 - client-server
 - P2P
- application service requirements:
 - reliability, bandwidth, delay
- Internet transport service model
 - connection-oriented, reliable: TCP
 - unreliable, datagrams: UDP
- specific protocols:
 - HTTP
 - Bluetooth and Zigbee
 - iSCSI, FC
- Networked Storage Applications

Application Layer

Most importantly: learned about protocols

- typical request/reply message exchange:
 - client requests info or service
 - server responds with data, status code
- message formats:
 - headers: fields giving info about data
 - data: info being communicated
- control vs. data msgs
- centralized vs. decentralized
- stateless vs. stateful
- reliable vs. unreliable msg transfer
- "complexity at network edge"

Transport Layer

Our goals:

- understand principles behind transport layer services:
 - multiplexing/demultiplexing
 - reliable data transfer
 - flow control
 - congestion control
- learn about transport layer protocols in the Internet:
 - UDP: connectionless transport, (read yourselves)
 - TCP: connection-oriented transport
 - TCP congestion control

Principles of Congestion Control

Congestion:

- ❑ informally: "too many sources sending too much data too fast for *network* to handle"
- ❑ different from flow control!
- ❑ manifestations:
 - lost packets (buffer overflow at routers)
 - long delays (queueing in router buffers)
- ❑ a top-10 problem!
- ❑ Delay and performance analysis

Transport Layer 3-7

Network Layer

- ❑ Forwarding and routing
- ❑ Virtual circuit and datagram networks
- ❑ What's inside a router
- ❑ Router architectures
- ❑ Routing algorithms
 - Link state
 - Distance Vector
- ❑ IP protocol

Transport Layer 3-8

Wireless and Bluetooth protocol

- Bluetooth Protocol Stack
 - Physical Layer
 - Baseband
 - Link Manager Protocol (LMP)
 - L2CAP
 - RFCOMM
- BlueZ
 - Full source code is available under the GPL
 - Socket based interfaces
 - Simple API for development tasks
 - Access to all Bluetooth host layers

Transport Layer 3-9

Link Access and LAN Protocols

- ❑ *Link layer services*
 - Framing, access, reliable delivery, flow control
- ❑ *Shared Medium Access* (multiple access control MAC)
 - Static allocation: channel partitioning
 - Random access: Slotted, CSMA/CD, CSMA/CA
 - Taking turns: token passing protocol
 - Delay analysis of a LAN
- ❑ *CSMA/CD and Ethernet:*

Transport Layer 3-10

Ken Yang, ECE, URI

Network Security

- ❑ Security Issues and requirements
- ❑ Traditional Encryptions
- ❑ DES
- ❑ Public Key encryption
- ❑ Firewalls
- ❑ Application gateways.

Transport Layer 3-11
